

# Teeth Straightening

Meet with your Invisalign® doctor,  
Dr Lauren Grant and start your journey.

### What is Invisalign® Treatment?

Invisalign® Treatment is the process of wearing a series of clear, removable aligners that gradually straighten your teeth. No brackets and wires, and none of the restrictions that come with metal braces.

### How long does Invisalign® Treatment take?

Invisalign® clear aligners can help straighten minor to complex teeth misalignment. The length of treatment can take on average 6 months<sup>2</sup>, but this is dictated by your Invisalign® dentist depending on how complicated your case is. Most people feel a difference wearing Invisalign® aligners after three months, and results are usually noticeable after six months.

### How is Invisalign® Treatment different than other teeth straightening options?

Invisalign® Treatment is the most advanced clear aligner system<sup>3</sup> in the world, backed by more than two decades of innovation. Unlike braces, Invisalign® clear aligners are removable and virtually invisible. There are no wires and brackets, so you don't need to change the way you brush and floss. And, you can continue to eat all your favourite foods.

### Are there any restrictions on what I can eat while in treatment?

None! Invisalign® clear aligners are removable, so there are no food restrictions at all (hello popcorn!). With traditional wires and brackets, there's a long list of foods you unfortunately can't enjoy because they can damage or get stuck in your braces.

### Why should I choose Invisalign at Broadway Dental in Woodhall Spa?

- Invisalign is virtually invisible: and unlike traditional braces, with Invisalign aligners we do not need to rely on wires or brackets and are hardly noticeable. They are transparent and bespoke, designed to fit your mouth.
- Rapid results: We can correct several orthodontic challenges giving you a bespoke, straight smile within months
- Removable: Invisalign aligners are comfortable as well as removable, so you'll find it easy to brush and eat normally.
- Comfortable: The aligners are more comfortable than traditional braces. They're flexible and custom-made for a comfortable fit.
